EDUCATION

University of California, Los Angeles (UCLA)

Los Angeles, CA

B.S. Degree: Mechanical Engineering (Transfer GPA: 4.0)

June. 2026 – May 2028

- Relevant Coursework: Intro to Circuit Analysis, Engineering Graphics and Design, Statics, Dynamics, Programming and Problem-Solving in MATLAB, Materials

EXPERIENCE

Engineering Student Researcher

June. 2026 – Present

Mission College | <https://abgscce-website.vercel.app/>

Santa Clara, CA

- Designed and optimized the airframe for a high-powered model rocket in SolidWorks, including a tilt and roll control system, ensuring structural integrity and component implementation in the vehicle based on 3000+ hours of CFD
- Conducted computational fluid dynamics (CFD) simulations in SimScale to validate aerodynamic performance, drag, pressure distribution, and stability prior to fabrication
- Engineered an active-control tilt/roll system using micro-servos, reading data from an IMU and altimeter in the avionics bay

Founding Engineer

June 2026 – Present

Aria AI | <https://aside-website.vercel.app/>

Berkeley, CA

- Designed and prototyped an improved hardware architecture, integrating Deepgram's speech-to-text and text-to-speech capabilities
- Produced and posted social media content across Instagram and TikTok, amassing 25K+ views and growing the audience to 100+ followers
- Selected for the Deepgram (YC W16) Startup Program, earning sponsored access to Deepgram's voice AI APIs and engineering resources

Associated Student Government Senator

Aug. 2025 – May 2026

Mission College

Santa Clara, CA

- Represent student interests in discussions with college administrators and campus leadership
- Advocate for policies & programs that improve student engagement, academic success, and resource accessibility
- Participated in institutional leadership retreat addressing campus-wide academic and operational initiatives

PROJECTS

Aside AI | 1st DeepGram Track, Berkeley AI Hackathon | DeepGram, Redis, QNX, Python, Microcontrollers

- Built a clip-on camera and mic that narrates the user's surroundings in real time through different AI personalities
- Developed a modular system using a Raspberry Pi (QNX 8.0) capture device, Python coordination, and React Native app, achieving live end-to-end narration in 1-2 seconds

Mission Launch Rocketry | OnShape, 3D Printing, Microcomputers

- Founded and served as President of college rocketry club, overseeing 52 members, managing budget, and directing design-build-launch projects from concept through flight
- Integrated dual-deployment recovery system in a two-stage high power rocket (drogue and main parachutes) with staged separation sequencing from EasyMini and EasyMega flight computers

Recco | Y Combinator AI Growth Hackathon | Computer Vision, Deepgram, Fiber, Convex, CV Service

- Built a camera-first iOS networking assistant that identifies people at events in real time by fusing on-device face tracking with cloud vision, identity lookup, and voice control
- Engineered a SwiftUI + AVFoundation camera pipeline with Apple Vision face tracking, a target-lock reticle, and an AR overlay that resolves the person nearest screen center on voice or text command

TECHNICAL SKILLS

Coding: C++, MATLAB, Python, JavaScript, HTML

CAD: SolidWorks, Onshape, AutoCAD, Fusion360, Revit

Manufacturing and Lab Tools: 3D Printing, Soldering, Microcontrollers, SimScale, LTSpice, QNX, Microcomputers, Computer Vision
